

Manufacturing

OUR SERVICES

PRODUCT DEVELOPMENT

The majority of the products developed and manufactured at Bioglan are creams, gels, ointments and lotions for topical application.

ANALYTICAL

Bioglan has skilled and experienced staff and well-equipped laboratories ready to solve your analytical problems, and provide routine support testing, from raw material to finished product.

MANUFACTURING

The Bioglan facility allows us to provide non-sterile clinical trial batches (phase I, II, and III) as well as commercial scale batches for world-wide sales.

QUALITY

The quality system fulfils the EU and FDA GMP (Good Manufacturing Practices) requirements as well as the ISO 13485 standard for Medical Devices. The facilities are regularly inspected for GMP compliance by MPA.

Bioglan's premises are comprehensively equipped with modern laboratories and production areas for semi-solid products such as gels, ointments, creams and liquids. The facility is equipped for large-scale manufacturing and produces for sale in Europe, North America, Australia, Middle East, Far East and Africa.

The team that supports you in product development has extensive understanding of the commercial manufacturing processes. Seamless scale-up, continuous method and process development and validation will assure the quality of your product and reduce cost and shorten the development time.

The development team will assist you in

- Process development for pilot and commercial scale manufacturing
- Manufacturing process optimization and validation
- Cleaning validation
- Clinical material manufacturing
- Scale-up manufacturing
- Process transfer and adaptation – site transfers – if required

Specialists in semi-solids

- Facility and equipment designed for pharmaceutical production
- Validated purified water system with tap points in every production room
- Filtered air without re-circulation in all rooms where product and raw materials are exposed to the environment
- Separate area for dispensing of active substances and flammable material
- Climate controlled and refrigerated warehouse space
- World-wide distribution support
